- 1.- Carbon Dioxide, Compressed, CAS# 124-38-9, UN1013

**SECTION III – HAZARDS IDENTIFICATION**

Liferaft contains a steel or aluminum cylinder of gas under pressure which may discharge or rupture under extreme temperatures. Keep away from flame or flame producing sources.

**SECTION IV – FIRST AID MEASURES**

<b>SKIN CONTACT</b>	N/A
<b>EYE CONTACT</b>	N/A
<b>INHALATION</b>	N/A
<b>INGESTION</b>	N/A

In general, liferafts present no hazards that would require first aid measures.

<b>Hazardous Combustion Products</b>	May form harmful fumes under fire conditions. Use air-ventilated full mask and full protective clothing when fighting fires.

**SECTION VI – ACCIDENTAL RELEASE MEASURES**

<b>Leak and Spill Procedures</b>	Hazardous materials are contained in sealed units within packed liferaft. Spills should pose no threat if the sealed units are not breached. If compressed gas cylinder ruptures, ventilate area. Ignition sources must be avoided. Handle materials with care.
----------------------------------	---

**SECTION VII - HANDLING AND STORAGE**

<b>Handling Procedures and Equipment</b>	Do not drop the packed liferaft. Do not pull the inflation lanyard (painter line) on the raft. Only lift the packed raft by its handles if packed in a fabric valise. Opening the raft valise may cause the raft to inflate. Liferaft can cause injury if inflated close to people or in a confined area. The liferaft's compressed gas cylinder is equipped with a pressure relief device. The device will vent gas from the cylinder if stored at temperatures above 130°F. The raft may partially or fully inflate if the pressure relief device activates.
<b>Storage Requirements</b>	These units should be stored in a cool, dry area away from danger of sparks, heat or flame.
